

# Graduation Seminar

## “Stochastic Analysis and Fractal Processes“

Prof. H.-J. Engelbert, Prof. M. Zähle

WS 2010/2011

This weekly research seminar deals with problems from stochastic analysis and fractal processes and related topics. Special interests are directed to applications in finance and insurance. It will serve as graduation and research seminar in the frame of the Marie Curie Initial Training Network “Deterministic and Stochastic Controlled Systems and Applications“ (see web site <http://www.minet.uni-jena.de/Marie-Curie-ITN/> for more information, in particular, on the research and training goals). It is intended to be the platform for PhD researchers appointed in the Initial Training Network (ITN). The seminar will benefit from the contributions of members of the participating research groups of the Jena team of the ITN. All interested young researchers are welcome to take part in the work of the seminar. Especially, “pre-graduate“ students on the way to their diploma and graduate students are invited to join the seminar. The seminar will also profit from lectures given by invited speakers from inside and outside our University.

The seminar will take place on Thursdays, 16 - 18, in HS 5 A. **The starting date is October 21, 2010, 16:15**
